

Dave Bettner

Forward-Deployed Technical Leadership • Enterprise AI-Agent Systems • Solutions Engineering

Des Moines, Iowa • dbett4@gmail.com • davebettner.com • github.com/dbett4

SUMMARY

Customer-facing technical leader with 10+ years owning 0-to-1 enterprise deployments from discovery and solution design through UAT, go-live, adoption, and sign-off. Deep experience in reporting, data integrations, and operational workflows across Workiva, REST APIs, identity and access, ERP-connected reporting, and financial reconciliation. Builds internal agent-assisted delivery systems and public portfolio projects with bounded tools, readback, failure recovery, evaluation, and human review.

EXPERIENCE

LSL, LLP • Senior Manager

Nov 2025 – Present

- Lead LSL's Workiva services department (8 people), building Workiva reporting solutions for city and county finance teams and running live user sessions and UAT through client sign-off.
- Wrote and operate a multi-agent control plane (Hermes, Codex, Claude, Cursor) that dispatches coding assistants in parallel to build and QA client reporting workbooks; every generated link and formula is reviewed and accepted by a human before it reaches the client Workspace.
- Wrote a Python tool (Docker Compose, GitHub Actions CI) that reads client source ledgers and generates Workiva data links, formulas, and QA checks — reused across every city and county ACFR and Budget Book engagement to cut manual link-building and catch defects before UAT.
- Run multiple municipal ACFR and Budget Book implementations concurrently, from source-data reconciliation through statement tie-out and client acceptance.
- Shape bids, SOWs, estimates, RFP responses, demos, and delivery handoffs for municipal finance and ERP-connected reporting.

Citrin Cooperman • Manager of Digital Services

Dec 2024 – Oct 2025

- Led a 5-person delivery team building a custom data-collection and reporting automation in Workiva with bidirectional integration to the customer's system of record (API/SSO), including audit trail and executive sign-off.
- Personally configured spreadsheets, documents, links, formulas, tables, queries, and workflows, and ran UAT through go-live.

Workiva • Solutions Architect

Oct 2022 – Oct 2024

- Led concurrent GRC and financial-reporting implementations from discovery through acceptance and adoption.
- Led requirements, data mapping, UAT, identity/access testing, and SSO, API, and ERP integration design.
- Partnered with Product and Engineering on customer feedback, escalations, and rollout risks.

Ambra Health • Solutions Consultant

Sept 2021 – Oct 2022

- Deployed HIPAA-controlled imaging workflows, EHR interfaces, and portal integrations through an acquisition transition.

Workiva • SEC Reporting Consultant

Sept 2015 – Sept 2021

- Delivered recurring SEC reporting and XBRL services across GAAP, IFRS, and ESEF for 20+ public-company customers each quarter under filing deadlines.

SELECTED ENGINEERING PROJECTS — AI AGENTS & ENTERPRISE SYSTEMS

Technical skills: Python, TypeScript, SQLite, Docker Compose, MCP/FastMCP, OAuth/API integration, hybrid retrieval and reranking, agent evaluation, capability routing, idempotency, failure recovery, human review.

Accounting Acceptance Lab

github.com/dbett4/accounting-acceptance-lab

Credential-free Python and SQLite lab for synthetic accounting reconciliation: hybrid retrieval and reranking, citation-backed proposals, exact-action approval, atomic effects, readback, and uncertain-write recovery.

Evidence: 32 tests and public CI · **Held-out fixture:** retrieval 10/16 → 16/16; **deterministic gate** recorded zero false or unsupported accepts

Personal Agent Operating System

Local-first, multi-runtime system for coordinating AI work across enterprise tools and repositories. Designed around capability routing, bounded tools, role-based orchestration, readback, rollback, independent verification, privilege brokerage, and durable receipts.

Role: Architected and operated independently · **Evidence:** independent verification and durable receipts

Hermes Deployment Lab

github.com/dbett4/hermes-enterprise-deployment-lab

FastMCP lab with a mock enterprise API and workflow runner. Exercises separate approval, post-commit failure, idempotent retry, restart/replay, telemetry, and no-apply cloud validation. Synthetic lab, not a customer deployment.

Role: Designed and implemented · **Scope:** Synthetic reference implementation · **Evidence:** credential-free failure/replay proof

Regulated Reporting MCP

github.com/dbett4/regulated-reporting-mcp

OAuth-backed MCP integration for a Workiva-shaped reporting API: pagination, async jobs, controlled mutations, and a guarded default tool surface.

Role: Designed integration and guarded surface · **Scope:** Sanitized API model · **Evidence:** contract coverage and offline demo

Upstream Agent-Systems Contributions

github.com/block/buzz/pull/5620 · github.com/NousResearch/hermes-agent/pull/84621

Open-source contributions covering coordinated HTTP rate-limit retries across RestClient clones and desktop session recovery across profile boundaries.

Role: Upstream contributor · **Scope:** Open-source agent infrastructure · **Evidence:** public pull requests

SKILLS

Python

Docker Compose

GitHub Actions CI

MCP/FastMCP

OAuth/API integration

SSO integration

ERP connectors

Hermes/Codex/Claude/Cursor agent orchestration

EDUCATION

Iowa State University

M.Acc. 2017 · B.S. Accounting 2016
