

Dave Bettner

Forward-Deployed Technical Leadership • Enterprise AI-Agent Systems • Solutions Engineering

Des Moines, Iowa • dbett4@gmail.com • davebettner.com • github.com/dbett4

SUMMARY

Customer-facing technical leader with 10+ years turning complex enterprise workflows into signed-off implementations across finance, assurance, healthcare, and regulated reporting. Works between customer workflow, product, and engineering to shape bounded integrations, AI-assisted workflows, and verifiable delivery paths. Public engineering includes MCP integrations, guarded tools, failure recovery, evaluation, and human-review gates.

EXPERIENCE

LSL, LLP • Senior Manager

Nov 2025 – Present

Chicago, then Des Moines

- Player-coach for a five-person implementation team; personally build Workiva solutions and lead UAT, acceptance tracking, and go-live adoption.
- Shape bids, SOWs, estimates, RFP responses, demos, and delivery handoffs for municipal finance and ERP-connected reporting.
- Build controlled review workflows with human sign-off on customer-impacting changes.

Citrin Cooperman • Manager of Digital Services

Dec 2024 – Oct 2025

Workiva-platform finance and regulatory reporting rollouts

- Player-coach for a five-person Workiva team; built spreadsheets, documents, links, formulas, tables, queries, workflows, and UAT through go-live.
- Built a bidirectional data-collection and reporting workflow with audit trail and executive sign-off.

Workiva • Solutions Architect

Oct 2022 – Oct 2024

- Led concurrent GRC and financial-reporting implementations from discovery through acceptance and adoption.
- Led requirements, data mapping, UAT, identity/access testing, and SSO, API, and ERP integration design.
- Partnered with Product and Engineering on customer feedback, escalations, and rollout risks.

Ambra Health • Solutions Consultant

Sept 2021 – Oct 2022

- Deployed HIPAA-controlled imaging workflows, EHR interfaces, and portal integrations through an acquisition transition.

Workiva • SEC Reporting Consultant

Sept 2015 – Sept 2021

- Delivered recurring SEC reporting and XBRL services across GAAP, IFRS, and ESEF for 20+ public-company customers each quarter under filing deadlines.

SELECTED ENGINEERING PROJECTS — AI AGENTS & ENTERPRISE SYSTEMS

Technical skills: Python, TypeScript, Docker Compose, MCP/FastMCP, OAuth/API integration, agent evaluation, capability routing, idempotency, failure recovery, human-in-the-loop controls.

Personal Agent Operating System

Local-first, multi-runtime system for coordinating AI work across enterprise tools and repositories. Designed around capability routing, bounded tools, role-based orchestration, readback, rollback, independent verification, privilege brokerage, and durable receipts.

Role: Architected and operated independently · **Evidence:** independent verification and durable receipts

Hermes Deployment Lab

github.com/dbett4/hermes-enterprise-deployment-lab

FastMCP lab with a mock enterprise API and workflow runner. Exercises separate approval, post-commit failure, idempotent retry, restart/replay, telemetry, and no-apply cloud validation. Synthetic lab, not a customer deployment.

Role: Designed and implemented · **Scope:** Synthetic reference implementation · **Evidence:** credential-free failure/replay proof

Hermes Enterprise Evaluation Kit

github.com/dbett4/hermes-enterprise-evaluation-kit

Policy-bounded evaluation layer for Hermes: approved configs, independent checks, human review gates, and receipts that keep weak evidence labeled weak.

Role: Designed evaluation layer · **Scope:** Synthetic cases · **Evidence:** offline proof; live run remains needs_review

Regulated Reporting MCP

github.com/dbett4/regulated-reporting-mcp

OAuth-backed MCP integration for a Workiva-shaped reporting API: pagination, async jobs, controlled mutations, and a guarded default tool surface.

Role: Designed integration and guarded surface · **Scope:** Sanitized API model · **Evidence:** contract coverage and offline demo

Upstream Agent-Systems Contributions

github.com/block/buzz/pull/5620 · github.com/NousResearch/hermes-agent/pull/84621

Open-source contributions covering coordinated HTTP rate-limit retries across RestClient clones and desktop session recovery across profile boundaries.

Role: Upstream contributor · **Scope:** Open-source agent infrastructure · **Evidence:** public pull requests

SKILLS

Python

Docker Compose

Hermes Agent

MCP/FastMCP

OAuth/API integration

idempotency/failure recovery

forward-deployed delivery

human review gates

failure injection/debugging

capability routing

fail-closed privilege brokerage

EDUCATION

Iowa State University
M.Acc. 2017 · B.S. Accounting 2016
