Summary

I'm looking for my next role building AI tools and agent workflows. My background combines accounting, enterprise implementation, and 10+ years in reporting and customer delivery. I turn business requirements into working software, review workflows, and delivery plans.

Experience

LSL, LLP · Senior Manager

Started Nov 2025

- Led Workiva delivery for city and county finance teams, from source-ledger mapping and discovery through financial reports, budget books, user acceptance testing, training, and client sign-off.
- Scoped engagements, prepared estimates and statements of work, responded to RFPs, and demonstrated proposed solutions. Developed training and acceptance criteria that help client teams take ownership.
- Directed AI-assisted development of reusable Python tools that generate reporting links, formulas, and validation checks across engagements.
- Built internal AI-assisted review workflows with source traceability and human review before client changes.

Citrin Cooperman · Manager of Digital Services, Workiva

Dec 2024–Oct 2025

- Managed a five-person Workiva implementation team. Coached consultants, resolved customer escalations, and led configuration, testing, training, and user acceptance testing through go-live.
- Led a data-collection and reporting implementation with bidirectional API integration to the customer's system of record, SSO, and an audit trail, through executive sign-off.

Workiva · Solutions Architect

Oct 2022–Oct 2024

- Led 6–12 concurrent governance, risk, compliance, and financial-reporting implementations from customer discovery through production use.
- Translated reporting, data, access, and workflow requirements into implementation designs, test plans, and customer enablement, including API, SSO, and ERP integration requirements.
- Worked with Sales and Customer Success on technical evaluations and delivery handoffs. Brought recurring customer issues and technical constraints to Product and Engineering.

Ambra Health · Solutions Consultant

Sep 2021–Oct 2022

- Implemented medical-imaging and EHR workflows in HIPAA-controlled environments. Resolved API, SFTP, webhook, and access issues with customer IT teams through go-live.

Workiva · SEC Reporting Consultant

Sep 2015–Sep 2021

- Delivered SEC reporting and XBRL services for 20+ public-company customers each quarter. Managed review cycles, customer communication, and issue resolution under filing deadlines.

Selected Projects

AI-assisted business operations

- Directed AI-assisted product and workflow development for a creative-services and commerce portfolio, connecting client intake, creative review, supplier qualification, and delivery.
- Built an intake and review path for client briefs, content plans, sample assets, and owner feedback; organized supplier requirements and comparison packets for owner decisions.

Passal · Independent product

- Own product direction, interface design, and implementation through AI coding tools for a learning platform with a production web app and native iOS and Android clients.
- Build study workflows that connect lecture sources, study choices, and practice. Project stack includes React, Next.js, TypeScript, and SQLite.
- Built payment integration and handled iOS App Store submission, reviewer feedback, and resubmission.

AI-assisted delivery workflows · Internal work at LSL

- Built workflows to review source material, compare reports with source records, classify exceptions, and route discrepancies for human review before client changes.
- Used source tracing and recorded decisions to support review, exception ownership, and recovery before customer-impacting changes.

Public agent tools

- Accounting Acceptance Lab: built a Python/SQLite lab that tests accounting agents on synthetic reconciliation cases, supporting evidence, approval, and failed-write recovery.
- Regulated Reporting MCP: built an MCP server for reporting APIs through OAuth, with caller confirmation and verification according to each tool's contract. Public demo uses mock data.

Skills

Solutions: technical discovery, demos and technical evaluations, solution design, API and ERP integration requirements, user acceptance testing, go-live, customer enablement, executive stakeholder communication.

Build: Python, SQL/SQLite, REST APIs, OAuth/SSO, MCP, React, Next.js, TypeScript, HTML/CSS/JavaScript, web and native app delivery, Docker Compose, Git, and GitHub Actions.

AI workflows: daily product development through T3 Code, Codex, and Claude Code; source-based review workflows; evaluation harnesses; human review and failed-write recovery.

Education

Iowa State University · Master of Accounting, 2017 · B.S. Accounting, 2016
