I design and build Passal's study experience and Leasekite's vehicle comparison and lease-request workflows, working through AI coding tools. My product decisions draw on 10+ years in financial-reporting software and customer delivery.

Selected Product & Technical Work

Passal — Study product

- Own product direction, interface design, and implementation through AI coding tools for a study app that helps students choose what to study next, with practice tied to lecture sources.
- Project stack: React, Next.js, TypeScript, and SQLite.

Leasekite — Product in development

- Own product direction, interface design, and implementation through AI coding tools for vehicle comparison and lease-request workflows.
- Keep requests as drafts for review and negotiation decisions with the user.
- Project stack: HTML, CSS, JavaScript, and Python/SQLite supporting services. In development; private preview.

Accounting Acceptance Lab — Synthetic evaluation

- Built a Python/SQLite lab that tests accounting agents on synthetic reconciliation cases, including supporting evidence, approval before changes, and recovery from failed writes.

Regulated Reporting MCP — Mock-data integration demo

- Built an MCP server for AI access to reporting APIs through OAuth, with caller confirmation and verification according to each tool's contract. Public demo uses mock data.

Lockfield — Workiva consulting practice

- Shaped the positioning, website, and reporting resources around training and client ownership.

Tools

React, Next.js, TypeScript, HTML/CSS/JavaScript, Python, SQL/SQLite, REST APIs, OAuth/SSO, MCP, Docker Compose, and GitHub Actions. Development uses AI coding tools throughout.

Education

Iowa State University — Master of Accounting, 2017 · B.S. Accounting, 2016

Experience

LSL, LLP — Senior Manager

Nov 2025–Present

- Lead Workiva delivery for city and county finance teams, mapping source-ledger data into financial reports and budget books and running user sessions and testing through client sign-off.
- Scope consulting engagements, prepare estimates and statements of work, respond to RFPs, and demonstrate proposed solutions to customers.
- Reset implementation expectations around client ownership: our team would enable the client team and help them become comfortable doing the work themselves.
- Develop Python tools that generate Workiva data links, formulas, and validation checks from client ledgers, reused across financial-reporting and budgeting engagements.
- Build AI-assisted workflows that compare reports with source records and flag accounting discrepancies for review, with human review before client changes.

Citrin Cooperman — Manager of Digital Services, Workiva

Dec 2024–Oct 2025

- Managed a five-person Workiva implementation team. Coached consultants, resolved customer escalations, and led testing and training through go-live.
- Led a data-collection and reporting implementation with bidirectional API integration to the customer's system of record, SSO, and an audit trail. Led user acceptance testing through go-live and executive sign-off.

Workiva — Solutions Architect

Oct 2022–Oct 2024

- Led 6–12 concurrent financial-reporting and governance, risk, and compliance implementations from customer onboarding through production use.
- Ran requirements workshops and translated reporting, data, and access needs into implementation designs and test plans, including API, SSO, and ERP integration requirements.
- Worked with Sales and Customer Success on technical evaluations and delivery handoffs. Brought recurring customer issues to Product and Engineering and developed repeatable delivery guidance.

Ambra Health — Solutions Consultant

Sep 2021–Oct 2022

- Implemented medical-imaging and EHR workflows in HIPAA-controlled environments. Worked with customer IT teams to resolve API, SFTP, webhook, and access issues through go-live.

Workiva — SEC Reporting Consultant

Sep 2015–Sep 2021

- Delivered SEC reporting and XBRL services for 20+ public-company customers each quarter. Managed review cycles, resolved reporting issues, and helped customers meet filing deadlines.
